The book consists of two parts. The first one - theory part - is devoted to properties of linear diffusions in general and Brownian motion in particular. Results are given mainly without proofs. The second one - formula part - is a table of distributions of functionals of Brownian motion and related processes. The collection contains more than 2500 numbered formulae.

Appendix 2 is a brief exposition of special functions and their properties. It is valuable, because many special functions appear in the formulae. Appendix 3 is dedicated to inverse Laplace transforms. Appendix 4 on differential equations is useful, when the Feynman-Kac formula is used.
