~~Scar Tissue Pain: Treatment, Symptoms, Starting Years ...~~

A scar is an area of fibrous tissue that replaces normal skin after an injury. Scars result from the biological process of wound repair in the skin, as well as in other organs and tissues of the body. Thus, scarring is a natural part of the healing process.

~~Scar - Wikipedia~~

What is scar tissue? Scars are marks on the skin or tissue of the body, which form after trauma and can affect skin, muscles, ligaments and tendons. As part of the body's repair process, new protein (collagen) fibers replace the injured tissue and a scar is formed.

~~Understanding Scar Tissue: What It Is + How To Care For It~~

Scarring is part of the body's natural healing process after tissue is damaged. When the skin is wounded, the tissues break, which causes a protein called collagen to be released. Collagen builds up where the tissue is damaged, helping to heal and strengthen the wound.
