An ice age is a period of colder global temperatures that features recurring glacial expansion across the Earth ' s surface.

Ice Age - Definition & Timeline - HISTORY

An ice age is a long period of reduction in the temperature of the Earth 's surface and atmosphere, resulting in the presence or expansion of continental and polar ice sheets and alpine glaciers. Earth's climate alternates between ice ages and greenhouse periods, during which there are no glaciers on the planet.

Ice age - Wikipedia

Ice age, also called glacial age, any geologic period during which thick ice sheets cover vast areas of land. Such periods of large-scale glaciation may last several million years and drastically reshape surface features of entire continents. A number of major ice ages have occurred throughout Earth history.

ice age | Definition & Facts | Britannica

A University of Arizona-led team has nailed down the temperature of the last ice age—the Last Glacial Maximum of 20,000 years ago—to about 46 degrees Fahrenheit (7.8 C).

to keep more CO₂ in the ocean, and thus to explain the ice age atmospheric CO₂ drawdown, has also been recognized for decades. Until now ...

What caused the ice ages? Tiny ocean fossils offer key ...

The Ice Ages began 2.4 million years ago and lasted until 11,500 years ago. During this time, the earth's climate repeatedly changed between very cold periods, during which glaciers covered large parts of the world (see map below), and very warm periods during which many of the glaciers melted.

When Were the Ices Ages and Why Are They Called That ...

The late Paleozoic ice-house, formerly known as the Karoo Ice Age, was between 360 – 260 million years ago (Mya) during which large land-based ice-sheets were present on Earth's surface.

What Caused the Ice Ages? Tiny Ocean Fossils Offer Key ...

Origin and definition. The last glacial period is often colloquially referred to as the "last ice age", though the term ice age is not strictly defined, and on a longer geological perspective the last few million years could be termed a single ice age given the continual presence of ice sheets near both poles. Glacials are somewhat better defined, as colder phases during which glaciers advance ...

Last Glacial Period - Wikipedia

Ice ages are times when the entire Earth experiences notably colder climatic conditions.

What Triggers Ice Ages? | NOVA | PBS

The Pleistocene Epoch is typically defined as the time period that began about 2.6 million years ago and lasted until about 11,700 years ago. The most recent Ice Age occurred then, as glaciers...

Pleistocene Epoch: Facts About the Last Ice Age | Live Science

In the 1970s, scientists discovered that the concentration of the atmospheric greenhouse gas carbon dioxide (CO₂) was about 30% lower during the ice ages. That prompted theories that the decrease in atmospheric CO₂ levels is a key ingredient in the glacial cycles, but the causes of the CO₂ change remained unknown. Some data suggested that, during ice ages, CO₂ was trapped in the deep ocean ...

What Caused the Ice Ages? Tiny Ocean Fossils Provide Key ...

An ice age is a long interval of time (millions to tens of millions of years) when global temperatures are relatively cold and large areas of the Earth are covered by continental ice sheets and alpine glaciers.

Glad You Asked: Ice Ages – What are they and what causes ...

In most cases, the term “ice age” refers to the geological period called the Pleistocene, which lasted from about 2,588,000 to 11,700 years ago. The Pleistocene spanned the world’s most recent...
